### Age group focus

11 - 15 ye...	Female	2,93%
11 - 15 ye...	Male	23,96%
16 - 20 ye...	Female	13,69%
16 - 20 ye...	Male	59,42%

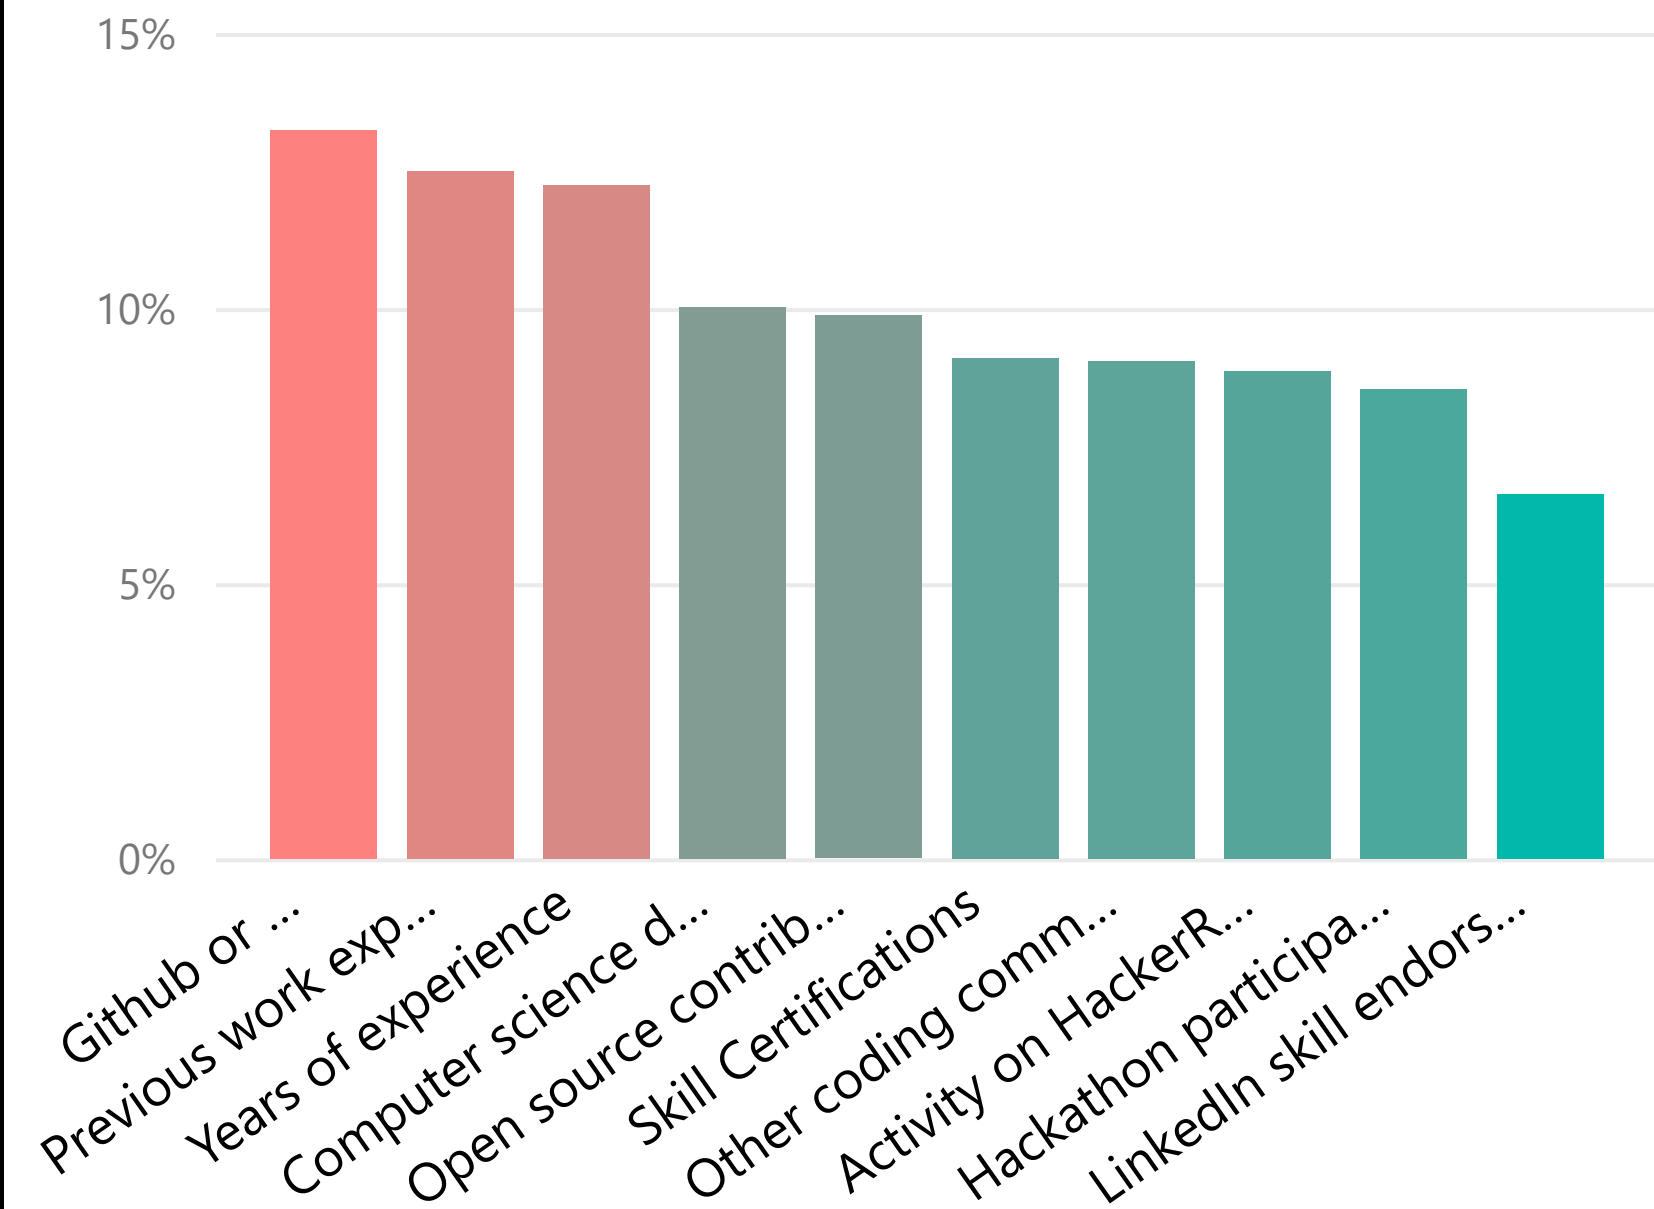

One possible explanation of the gender gap is the late exposure to coding for women.

**If no experience, focus on personal projects, with an emphasis on problem solving.**

## Analysis summary

- There is a **very clear gap** in terms of gender in the tech industry.
- It is a **global phenomena** across the globe.
- One possible variable is the **age of starting learning to code**.
- When looking for a job, learning technical skills are important but hiring managers are also looking for **more broad competencies** like **problem-solving** as well as **personal projects**.

## Actions for Women in Tech

- Continuing to **raise awareness among girls** by conducting more **workshops targeting 11-15 years old girls**.
- Offer more training for women to adapt to the job market with both **technical training in high-demand languages**, and, more general training like **computational thinking**.
- Creating more **opportunities for women to work and to showcase personal projects** (Github workshops, hackathons...).
